- Section 508 guidelines for web applications as described at the [US Access Board web site](http://www.access-board.gov/).

- ✖ 1194.22(a)

A text equivalent for every non-text element shall be provided (e.g., via "alt", "longdesc", or in element content).

- ✖ a.1 All IMG elements are required to contain either the ALT or LONGDESC attribute.

The ALT or LONGDESC attribute is used by user agents to supply information about an image when images cannot be shown.

- ✖ IMG element contains no ALT attribute.

Documents shall be organized so they are readable without requiring an associated style sheet.

 - d.1 Organize documents so they may be read without style sheets.

Organize documents so they may be read without style sheets. For example, when an HTML document is rendered without associated style sheets, it must still be possible to read the page.

 - Page uses an internal style sheet. Verify that the page can be read without it.

 - d.2 Ensure Color and background color may be specified at any level in the cascad...

Users with vision loss or cognitive challenges often require specific foreground (text) and background color combinations. For instance, many people with low vision find it much easier to see a Web page that has white text on a black background, so they may have set their user agent to create this contrast. If the author specifies that the text must be black, then it may override the settings of the user agent and render a page that has black text (specified by the author) on black background (that was set in the user agent). This principle also works in reverse. If the Webmaster forces the background to be white, then the white background specified by the author would be the same color as the white text (which was set in the user agent) rendering the page unusable to the user. Therefore, if the author specifies a foreground (text) color then they should also specify a background color which has sufficient contrast (link) with the foreground and vice versa.

 - Page contain no elements that specific foreground color but no background color or vice versa

Row and column headers shall be identified for data tables.

 - g.1 For data tables, identify row and column headers.

This check identifies data tables that do not have any TH elements. Data tables are recognised as having a border attribute greater than 0. Tables with no border require a visual check, unless they contain input, image or child table elements, or cells with long text, indicating they are most likely layout tables.
